Integrating Safe Label System and Anesthesia Carts

Connecting technologies to improve medication safety and workflow efficiency

Codonics has partnered with the leading anesthesia dispensing cart (ADC) manufacturers to provide comprehensive barcode medication labeling and unparalleled safety through integration. With hospitals driven more than ever to provide high-quality patient care and prevent readmissions, the focus on decreasing medication errors has become more intense. In the OR and procedural areas, ADCs help keep medications well organized and maintained. When integrated with Codonics Safe Label System® (SLS), the safety and accuracy of medication management and labeling compliance is significantly improved, helping to prevent medication errors.

With the medication decremented from the cart's inventory, safely prepared, and properly labeled with a TJC-compliant medication label, integration beyond the ADC is possible. Safe Label System integrates with AIMS/EHR systems (e.g. Epic and Cerner) to close the loop at administration, electronically documenting the NDC of every medication administered to the patient for improved charge capture and 340B compliance.

Propofol
10 mg/mL

Safe Label System

SLS 550i

Meets the ISMP & APSF RECOMMENDATIONS to REDUCE medication errors*

INTEGRATION BENEFITS*

Propofol
10 mg/mL

- **Faster system access** that logs authorized users onto both systems simultaneously.
- **Significantly improves inventory management** and charge capture.
- **Helps eliminate stock outs** by automatically decrementing the ADC inventory and producing a compliant label.
- **Provides built-in visual and audible safety checks** to ensure medication accuracy.
- **Triggers documentation** into AIMS/EMR at administration.
- **Streamlines deployment** of new and modified drug data from a single source of truth.
- **Simplifies OR workflow** by reducing redundant tasks and eliminates interruptions due to inaccurate or incomplete drug database.
- **Include patient name and ID** on syringe labels.

*Codonics is working with multiple partners to provide various levels of software and hardware integration. Your Codonics representative can confirm availability.

Integrating Safe Label System and Anesthesia Carts

Connecting technologies to improve medication safety and workflow efficiency

Fast and easy.

Combined, Safe Label System and anesthesia medication carts can reduce medication errors made during the selection, preparation and administration of injectable and intravenous drugs, helping ensure the right medication is administered to the right patient prior to, during and after surgery.
